

## For Runners aiming at 25 to 40 & 40 to 55 Miles/Week

Designed by London Marathon winner Mike Gratton

These schedules are aimed at runners who have already reached a fair level of regular training and have been running for 6 months to 1 year and have probably already completed shorter races. The aim is to establish long runs fairly early on so that marathon endurance is established before specific speed work brings you to a peak. Maximum mileage will thus be reached 2 months before the marathon and once this is achieved the aim is then to make you faster while maintaining the endurance base. For explanation on terminology used see Notes for 2:09 Events training Plans
